INSULATION TESTS TWO-WINDING TRANSFORMERS

A transformer is a static electrical device that transfers electrical energy between two or more circuits through electromagnetic induction. A varying current in one coil of the transformer produces a varying magnetic field, which in turn induces a varying electromotive force (emf) or "voltage" in a second coil. Power can be transferred between the two coils, without a metallic connection ...

Transformer - Wikipedia

Transformers are essential parts of our electric power infrastructure, and transformer components such as bushings and tap-changers and insulation are essential parts of transformers, ensuring they operate reliably and safely.

Terminal marking of power transformers is determined by ANSI standards. Two-winding transformers have terminals designated by H and X (e.g. H 1, H 2, X 1, X 2,), where H is the higher voltage-rated winding and X is the lower voltage winding.
