Acids, Bases and Salts 19 Which of these " vanilla, onion and clove, can be used as olfactory indicators on the basis of your observations? Let us do some more activities to understand the chemical properties

CHAPTER2 Acids, Bases and Salts - National Council of

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops, and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled round the same axis, and have the same pitch of 34 Å (3.4 nanometres).

19.10 ACETALS AND THEIR USE AS PROTECTING GROUPS 923 The formation of hemiacetals is catalyzed not only by acids but by bases as well (Problem 19.16b, p. 910). However, the conversion of hemiacetals into acetals is catalyzed only by acids (Eqs. 19.47b and c).

19.10 ACETALS AND THEIR USE AS PROTECTING GROUPS

An acid is a molecule or ion capable of donating a hydron (proton or hydrogen ion H^+), or, alternatively, capable of forming a covalent bond with an electron pair (a Lewis acid).. The first category of acids is the proton donors or Brønsted acids. In the special case of aqueous solutions, proton donors form the hydronium ion H_3O^+ and are known as Arrhenius acids.

Acid - Wikipedia

Properties of Carboxylic Acids . 1) Strong hydrogen bonding - Polar $C=O$ and $O-H$ make hydrogen

bonding occur readily with water and other RCOOH (forms dimers) Boiling points are higher than alcohols of equivalent molecular weight . 2) Acidic behavior: Carboxylic acids readily react with bases to form salts and water:

Carboxylic acids: R - COOH COOH = -carboxyl group
