A finite-state machine (FSM) or finite-state automaton (FSA, plural: automata), finite automaton, or simply a state machine, is a mathematical model of computation. It is an abstract machine that can be in exactly one of a finite number of states at any given time. The FSM can change from one state to another in response to some external inputs; the change from one state to another is called a ...

In mathematics and computer science, an algorithm (/ ˈɒrɪθməˈtɪk / (listen)) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing and automated reasoning tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a ...
